Technical Interview

Workshop

Everything you always
wanted to know about
technical interviews
(but were afraid to ask)

Most important thing
BY FAR!

TECH ITW

Kinds of Tech ITW

Show me your code

Casual conversation.

Code Challenge

Little project.

Show me your Code

- Sometimes the best interview is no interview at all.
- Don't "clean" your GitHub account, pin whatever you want to highlight.
- Try to know your code.
- Don't stop coding.
- Keep coding!
- Why are you not coding right now?

Casual Conversation

- **“Non-technical” questions:**
 - No right or wrong answers.
 - Try to read your interviewer.
 - In case of doubt... be yourself!
- **Technical questions:**
 - There is a right answer.
 - It's ok to say “I don't know”, don't bullshit!
 - Don't panic, show how your brain works.

Code challenge (a.k.a. Kata)

- What can I say that you don't already know, kata masters?
- Review.
- Practice.
- If you don't know to solve it, at least analyze it.

My little Project

- Set of specs.
- Ask if you need it.
- It could be:
 - Cloning a page like you did in module 1.
 - Building an API like you “did” in module 2.
 - Making a SPA like you did in module 3.
 - Something a little bit different, but all the info is out there.
- Take advantage of your amazing cheat sheets.
- Don't copy code that you don't understand.
- Plan, prioritize, follow good practices.
